

WALKTHROUGH | ATLIQ COMMERCE : BATCH

SET UP

- An Azure SQL Server and database are created, along with tables and stored procedures to load source data and maintain audit logs. Source CSV files are uploaded to an Azure Storage Account with ADLS Gen2 enabled.

tbl	row
customers	40
products	25
orders	300
order_items	783
payments	246

BRONZE

- Azure Data Factory manages separate incremental and overwrite ingestion flows. Metadata and lookup activities iterate through CSV and Azure SQL tables to load data into Bronze.
- Incremental loads use a watermark and date-wise folders, while non-incremental loads overwrite existing data.
- Existing target data is deleted before loading, preventing duplicates during retries and ensuring idempotency.

- The trigger is used to run the ADF pipeline at a scheduled time.

SILVER

- Databricks job populate silver tables and run dbt build as next task.

- Silver delta tables are loaded into databricks unity catalog.

Table	tbl	rows
1	customers	40
2	products	25
3	orders	300
4	order_items	783
5	payments	246
6	marketing_spend	530
7	supplier_price_list	25

GOLD

- Fact and dimension tables are also loaded into the Gold layer, which uses an ADLS Gen2 external location.
